Introduction

Your astrological horoscope (natal chart) at birth is an important key to your personality and character, but your natal chart is not the last word about you. As time moves on after the moment of your birth, the Sun, Moon, and planets continue to circle through the heavens forming ever-changing kaleidoscopic patterns in relation to your own birth chart, bringing out or obscuring this or that part of you.

It can be useful to know how these ongoing planetary patterns relate to your life, and that is what this report is about. Here we calculate the primary astrological changes in your chart and interpret them so that you can see at a glance what is happening at any given time. Your events are arranged and interpreted chronologically, by well-known astrologer Michael Erlewine, and each event includes date and time, keywords, astrological indicator, and an astro-tarot card. We hope you enjoy your forecast.

In the tradition of astrology the planets have always been interpreted separately from the Sun and the Moon, which are called "The Lights," and for good reason. They literally light up our life and their combined interaction describes the essence of what is happening to us at any given time. Although called "The Moon Report," any mention of the Moon automatically involves the Sun, and of course, our Earth. These three, the Sun, Moon, and Earth, in their endless interaction are perhaps the single most important factor to observe in astrology.

The ever-changing relationship in the sky between the Sun and the Moon is perhaps most obvious at the Full Moon, but as we know, it is going on all the time. This report tracks the Sun-Moon relationship as it relates to your particular natal horoscope and birth chart, detailing all of the major events that take place in the current month for a specific life area and planet.

The Moon has always represented the 'mother', meaning anything that nurtures or cares for us, our support system, however that is made up. It also indicates our emotional makeup, how we feel about things, and the nostalgia of the past - where we came from.

On the other hand, the Sun represents the 'father' principle and the future, where we are heading toward and, to some degree, the means we have to get there. The Sun burns brightly, while the Moon is cool and comforting. The two together mark the endless play between the past and the future, and we here on Earth, are caught right in the middle, that is: the present.
